Develop a YouTube search web-app.

You can use an online API or use the mock data (provided below)
You can use your preferable IDE or an online editor (i.e. https://stackblitz.com/)

When the user will search for a song they will see a list of songs with their
corresponding thumbnail.

When users click on the thumbnail they will enter the song page and will be able to watch the
video.

On the right, the user will see related song thumbnails. When the user clicks on a related
thumbnail, the corresponding video will be displayed.
